

# MAGIDO stainless steel industrial cleaning technology

MAGIDO long experience of customer service Innovation. Environmental protection and customer satisfaction are the mains goals of our Company. As a matter of fact since the beginning of its life MAGIDO has developed probably the most efficient automatic washing units, in terms of reliability & cost ratio, on the market.

MAGIDO is fully engaged with the support of new technologies and qualified professionals to stay one step ahead of our competitors by manufacturing and supplying high technology user-friendly parts washers to meet all our different customer needs. We have managed to achieved this result without loosing sight of every day practical problems, but by just exploiting the years of experience we have in facing the everyday needs of cleaning problems.

## The professionals and their targets

MAGIDO or better still our team which includes an extremely qualified professional human resource are working together to bring to the market a trouble free products made for years of intensive trouble free use. This is the main reason why MAGIDO decided to manufacture all its range of degreasing units in rust free stainless steel -AISI 304 together with high standard electrical and mechanical components.

## Working for everybody's health and safety

Of course machine reliability and quality is just a part of the target that we are working for, as we consider it a primary duty to supply environmentally friendly units that use hot water with biodegradable soaps. And last but not least give maximum protection to the operators using the machines, for instance all pushbuttons are 24 Volt and all the moving parts are protected to avoid any accidental contact with them. Electronics are widely used in our heavy duty double tank series where all machines cycles are set by a PLC program through a "touch screen" and the driven basket is commanded by an inverter which controls speed, rotation, brake time and positioning of the basket itself.
